## NEWS RELEASE

### Morningbird Soon to Unveil Electronic Alchemy Prototype

**Huntsville, Alabama, USA, September 15, 2017** — The team at Morningbird Media Corporation has been working diligently to complete the version 0.2 prototype Electronic Alchemy 3De Printer. Electronic Alchemy is a 3D printing system that will be the first of its kind to produce functional electronic devices. Soon toys, games, gadgets, communication devices, drones, sensors, robots, and much more, will be able to be designed by and printed by consumers. The version 0.2 prototype is a multi material printer using proprietary materials and processes to create a myriad of devices for commercial, government, academic, and recreational use.

"Electronic Alchemy is a truly disruptive technology capable of changing the way to do things. Business practices, research and development, even the very creative process, can all be changed," says Dr. Chance M. Glenn, Sr., Morningbird's founder, CEO, and co-inventor of Electronic Alchemy.

The mission of Morningbird Media is to enable innovation. The Electronic Alchemy 3De Printer system will consist of a printer, the EA Design Cauldron and layout software, multi-material cartridges, and membership into a design community that will allow anyone to find and download designs, as well as contribute their own.

The development of Electronic Alchemy has been supported by funding from NASA and it looks to revolutionize the way everyone looks at consumer electronics. Follow Morningbird Media and get ready to purchase the Electronic Alchemy 3De system soon.
